Software Engineer | AI / LLM Systems

SUMMARY

Software engineer with 10+ years building production cloud systems on .NET, currently focused on AI engineering: RAG pipelines, agent architectures, and LLM infrastructure. Open-source maintainer (textstack.app — local-first AI reader, validated under load at 63K requests with \$0.002 measured cost per cycle). Active technical writer on Dev.to covering production LLM systems and AI operations.

SKILLS

- **Areas of expertise:** LLMs (OpenAI, Ollama, Anthropic), RAG architectures (Pinecone, Semantic Kernel, embeddings), agent patterns (ReAct, MCP server implementation, function calling). C# / .NET 10, TypeScript, React / React Native, PostgreSQL, Docker, OpenTelemetry, Microsoft Azure.
- **Open-source maintainer:** textstack.app (AGPL-3.0) — local-first AI reader.
github.com/mrviduus/textstack
- **Technical writing:** Dev.to (@mrviduus) — production LLM systems, GPU offload measurement, AI engineering postmortems. dev.to/mrviduus

PERSONAL PROJECTS

PROFESSIONAL EXPERIENCE

Pinnacle

Senior Software Engineer

Toronto, ON (Remote)
September 2022 — present

- Designed and maintained backend microservices in .NET 8, including SDKs and tooling integrated into customer build pipelines.
- Engineered observability layer with OpenTelemetry distributed tracing for production multi-tenant systems.
- Embedded load and stress testing into CI/CD pipelines to surface performance regressions before production.
- Refactored API documentation workflow with NSwag-based auto-generation, eliminating manual sync between code and docs.
- Drove developer ergonomics across the team through internal tooling, SDK iteration, and code review standards.

Tech: C#, .NET 8, ASP.NET Core, Azure DevOps, Docker, SQL Server, RabbitMQ, NSwag, OpenTelemetry, WebSockets, xUnit.

GlobalLogic

Software Engineer

Kyiv, Ukraine (Remote)
April 2021 — September 2022

Lifecycle Pricing platform:

- Co-designed big-data application targeting sub-10-second responses on multi-million-row datasets.
- Integrated Elasticsearch for indexing, real-time queries, and analytical aggregations.
- Hardened full-stack security across application boundaries.

CMMS Admin Panel (startup):

- Led backend service design and containerized deployment via Docker and Kubernetes.
- Provisioned Azure infrastructure and established CI/CD pipelines from scratch.
- Delivered features end-to-end including backend APIs and React/Redux UI.

Tech: C#, .NET 6, ASP.NET MVC/Core, MSSQL, Azure, RabbitMQ, React, Redux, Docker, Kubernetes, Elasticsearch, Splunk.

Infopulse

Software Engineer

Kyiv, Ukraine

September 2019 — April 2021

- Upgraded legacy .NET Framework modules to .NET Core for performance and maintainability gains.
- Contributed to monolith decomposition into microservices, including Azure Functions.
- Owned production stability through testing, debugging, and customer support escalations.

Tech: C#, ASP.NET Core 3.1, CQRS, Azure Functions, Cosmos DB, Angular, TypeScript, Redis.

NIK

Software Engineer

Kyiv, Ukraine

March 2018 — September 2019

- Led end-to-end development of a web application for solar plant meter data collection — designed architecture, implemented backend in ASP.NET Core, deployed production system.
- Integrated PostgreSQL with Memcached caching layer for time-series telemetry queries.

Tech: C#, ASP.NET Core, PostgreSQL, Memcached, Jenkins, Python, C, WinForms.

... + earlier PHP / web development experience (2016 — 2018).

ONLINE

- **GitHub:** github.com/mrviduus — textstack, AiAgents, rag-chatbot-dotnet, ReplyMate, LoadSurge, xUnitOTel.
- **Dev.to:** dev.to/mrviduus — technical writing on production LLM systems.
- **Personal blog:** vasyl.blog

EDUCATION

Master of Science in Computer Science · Kremenchuk State Polytechnical University, Ukraine
